

# Orchestrate AI systems on a unified platform

Small teams can achieve big results when AI development is simplified. **Azure** gives you one place to design how your AI works – connecting models, data, agents, and business systems without manual stitching of disconnected tools.

## Three ways a unified AI platform helps your business move faster

1

### Innovate faster with models, data, and agents all in one place.

**Foundry** consolidates essential AI capabilities into a single workflow. You can choose from thousands of models, set up retrieval, manage prompts, and orchestrate agents, all without needing machine learning engineers or complex infrastructure. **Azure is the only hyperscaler** offering both OpenAI and Anthropic models.

2

### Turn business data into intelligence instantly.

Purpose-built intelligence layers (IQs) give AI agents the context they need to reason, act, and deliver real business value, bringing together **Work IQ, Fabric IQ, and Foundry IQ** into a single, trusted foundation—connecting work context, enterprise data, and organizational knowledge—so agents aren't just reactive, but truly informed.

3

### Integrate seamlessly with your existing systems and tools.

Connect AI apps and agents to the platforms you already use. **Foundry** makes it simple to bring in business data, trigger workflows, or extend AI across productivity tools and software-as-a-service apps. Your developers can access 11,000 plus models and integrate across 1,400 plus business systems, accelerating development and reducing custom coding.

## CUSTOMER STORY

### Automating document processing with AI

LayerX, an AI startup serving document-heavy industries, needed a secure and efficient cloud foundation to help customers eliminate manual, error-prone workflows and boost productivity.

#### Saved 570 hours work annually

Automated time-consuming document processing and reduced manual effort with **Ai workforce**, an automation platform built on Azure AI

#### Increased efficiency and accuracy

Used Azure OpenAI, Azure AI Search, and Azure AI Document Intelligence for fast, reliable data extraction and translation

#### Secure, AI-powered presentation generation

Created anonymized, compliant pitch decks at scale, saving time and maintaining strict data privacy standards across financial institutions

## One platform, secure by default

Security is built into every layer, so your team can move fast with confidence. **Azure protects your data** across models, agents, and workflows, while built-in governance keeps access, usage, and activity aligned to your policies.

The result is AI that is safe, controlled, and ready for business use from day one.
