

Secure from code to cloud

Unify security across the full cloud app lifecycle

You need a cloud security mindset when adopting or using the cloud.

72%

of tech companies report insufficient cloud visibility¹

80%

of companies were affected by cloud security incidents in 2024²

96%

of organizations express moderate to extreme concern about cloud security³

Microsoft Azure: The broadest and deepest cloud security coverage

Azure provides built-in, multilayered protection that minimizes risks and protects your applications, physical datacenters, infrastructure, and operations. Support for Zero Trust principles requires verification at every step, with regular audits that help you meet your compliance, resilience, and sovereignty needs. Microsoft Defender for Cloud protects your AI workloads from emerging threats and vulnerabilities.

Unify threat remediation:

- Microsoft Defender for Cloud
- Azure App Service

50%

reduction of breach risk⁴

30%

less time to investigate and remediate threats⁴

40%

more efficient security teams⁵
